Projects

- **SocialSphere:** A Facebook-inspired social networking platform developed using PHP, MySQL, and Python. It enables users to create accounts, connect with others, and enjoy a smart recommendation system for content and connections tailored to individual interests.
- **NextWeather:** A real-time weather forecasting application built with React.js. It provides accurate predictions for the next day's weather using data-driven algorithms, ensuring users stay informed and prepared.
- **Alibaba-Store:** A modern e-commerce platform developed with React.js, featuring a dynamic, user-friendly interface and an intelligent recommendation engine that enhances the shopping experience by offering personalized product suggestions.
